6-24-6 plus ZINC

HIGHEST VALUE FOR YOUR LIQUID FERTILIZER DOLLAR

Research has shown that early growth and plant vigor are key contributors to top-yielding wheat crops. Cooler and wetter soil conditions in the fall can often be limiting factors to early growth and yield. Availability and speed of uptake in the fertilizer you apply with your wheat could mean the difference between a good wheat crop and a great wheat crop.

GoldStart - 'Fastest' Plant Food

Orthophosphate is immediately available to roots. Polyphosphate is not. With an 80:20 ortho:poly ratio, GoldStart contains more 'fast-food' than any other starter on the market.

GoldStart - plus ZINC

Zinc plays an important role in cell division and early plant growth. GoldStart has added zinc, not accidental' zinc (like other products).

GoldStart - 100% Water Soluble

You can be assured that all of the nutrients we sell are dissolved and are available to your plant roots. No solid materials are suspended in the liquid or lying on the bottom of your tank as black sludge. If you are not using GoldStart, is your liquid starter clear? (Go look.)
