

South West Ag is pleased to introduce...

Since 1996, the CROPLAN® brand has provided quality seed to farmers across North America. After 20 years in business, CROPLAN® is now able to offer an even broader selection of high-performing seed selected from genetics that meet unique and local challenges. CROPLAN® products are backed by 5 million data points gathered from across North America. This range of information and data gives us a good picture of the agronomic needs of a specific area, down to the field level.

Together with South West Ag Partners, CROPLAN® can bring all of these elements together with the goal of helping you realize the greatest yield and return on investment potential on every acre. We look forward to working with you.
