

# Respond Program

## We're onto something!

**Soybeans are capable of yielding 3 to 5 times higher than current yields.**

**Ask us how you can use the Respond and RespondMn Solutions to deliver the nutrients and fungicides that are most critical to converting more flowers into viable pods at the correct timing.**

## Previous years' results

The past 3 years of data show a higher yield benefit than the cost of using our Respond program!

Though there are still environmental risks... In a bad year you can cover your costs, but in a good year you can see huge results and a huge return.

Use the Respond program to maximize your fungicide results on soybeans.... If you don't cover your costs, we will!

## Respond

Features	Benefits
1. Fungicide*	Yield Protection
2. Nutrient	Yield Enhancement
3. Field Imaging**	Crop Monitoring
4. Advantage	Risk Reduction

\*Approved fungicides only

\*\*Using R7 satellite imaging

Looking for manganese as a nutrient? Ask about **RespondMN!**
